EXPERIENCE

MaternalCare Health - Founder & Product Engineer — 2024 - Present

Founder-led healthcare product for offline maternal care teams | Field partner: Global Care | Dominican Republic / Haiti

- Built and launched Maternal Care EHR, an offline-first Swift / SwiftUI iOS app digitizing prenatal records for mobile clinics serving 300+ expectant mothers across 8 regions in the Dominican Republic.
- Designed clinical workflows that replaced paper handoffs with longitudinal patient profiles, vitals, gestational age, fetal heart rate, sonography, risk flags, monthly checklists, and consult / waitlist triage.
- Led nurse and field-operator discovery, converting clinic feedback into rapid releases and using AI-assisted development workflows to shorten delivery cycles by ~40%.

OakTree Sponsorship Operations - Product & Front-End Engineering — 2024 - Present

Same Global Care field partnership

- Shipped a React / TypeScript / TailwindCSS operations platform for 50+ child profiles, sponsorship status, and real-time funding visibility; deployed at oaktree-ministry.vercel.app.
- Streamlined donation and child-profile workflows through stakeholder interviews and usability testing, helping non-technical staff identify funding gaps and sponsor actions faster.

Seoul National University Hospital (LAMIS) - Research Software Engineer — Seoul, Korea | 2023

- Built and deployed a cross-platform Python / PyQt6 desktop app for DICOM medical-imaging anonymization in a hospital research lab workflow; resolved a private-tag compliance gap and processed thousands of files with audit-log reporting. Docs: notion.site/DICOM-Anonymizer-Docs

PROJECTS

BCSD Lab - Front-End Lead (KOIN / Admin V2 / Owner Service) — Mar 2022 - Jun 2024

Official campus product collaboration with KOREATECH | BCSD Labs

- Owned front-end architecture for official KOREATECH campus services serving hundreds of daily users, using React, TypeScript, React-Query / RTK-Query, Zustand, Zod, and React-Hook-Form.
- Rebuilt the client data layer by migrating Recoil to Zustand, standardizing API cache/error handling, and improving form validation patterns across student, admin, and owner-facing surfaces.
- Created reusable Compound Component patterns, published a team-wide npm utility package, and automated PR workflows with GitHub Actions + Slack, eliminating ~30% duplicated logic and improving delivery speed by ~20-25%.

EDUCATION

Gordon College - B.S., Computer Science — Wenham, MA | Incoming Aug 2026

Korea University of Technology and Education (KOREATECH) — Cheonan, Korea | Mar 2022 - Feb 2024

B.S., Computer Science

TECHNICAL SKILLS

Languages:	Swift, JavaScript, TypeScript, Python
Frameworks & Libraries:	SwiftUI, React, React-Query, RTK-Query, Zustand, Zod, React-Hook-Form, TailwindCSS, Electron, PyQt6
Tools & Platforms:	Git, GitHub Actions, REST APIs, Vercel, Claude Code, Cursor, AI-assisted development
Product & Domain:	Healthcare IT, iOS Development, Front-End Engineering, Offline-First Systems, Medical Data Privacy

ADDITIONAL

Languages: Korean (Native), English (Professional Working Proficiency), Haitian Creole (Elementary)
Hapkido: 10+ years, Assistant Instructor, Seoul national team; represented Korea internationally (Philippines, Cambodia, 2014-2023)
